Journal of Engineering Mathematics **47:** 447–448, 2003.

Contents of Volume 47 (2003)

Vol. 47 No. 1 September 2003

D.E. Farrow and C.L. Stevens: Numerical modelling of a surface-stress driven density-stratified fluid 1–16

M.C. Recchioni and F. Zirilli: A new formalism for time-dependent electromagnetic scattering from a bounded obstacle 17–43

B.D. Shaw: Generalization of an asymptotic model for constant-rate aerosol reactors 45–60

Y. Dumon, K.L. Kuttler and M. Shillor: Analysis and simulations of vibrations of a beam with a slider 61–82

Vol. 47 No. 2 October 2003

C.D. Coman, A.P. Bassom and M.K. Wadee: Elasto-plastic localised responses in one-dimensional structural models 83–100

S.C.R. Dennis and P.J.S. Young: Steady flow past an elliptic cylinder inclined to the stream 101–120

R. Mallier: Stuart vortices in a stratified mixing layer: the Holmboe model 121–136

T.E. Stokes, G.C. Hocking and L.K. Forbes: Unsteady free-surface flow induced by a line sink 137–160

K.B. Haugen and P.A. Tyvand: Radiation of water waves from an oscillating source located at a slope of angle $\pi/4$ 161–174

Vol. 47 Nos. 3–4 December 2003

Mathematical Modelling of the Cardiovascular System

Guest edited by: F.N. van de Vosse

F.N. Van de Vosse: Mathematical modelling of the cardiovascular system 175–183

Cardiac mechanics

P. Segers, N. Stergiopulos, N. Westerhof, P. Wouters, P. Kolh and P. Verdonck: Systemic and pulmonary hemodynamics assessed with a lumped-parameter heart-arterial interaction model 185–199

R.C.P. Kerckhoffs, P.H.M. Bovendeerd, F.W. Prinzen, K. Smits and T. Arts: Intra- and interventricular asynchrony of electromechanics in the ventricularly paced heart 201–216

1D wave propagation and flow in branching tubes

S.J. Sherwin, V. Franke, J. Peiró: One-dimensional modelling of a vascular network in space-time variables 217–250

L. Formaggia, D. Lamponi and A. Quarteroni: One-dimensional models for blood flow in arteries 251–276

F.T. Smith, R. Purvis, S.C.R. Dennis, M.A. Jones, N.C. Ovenden and M. Tadjfar: Fluid flow through various branching tubes 277–298

Mechanical and mass-transfer models related to atherogenesis

M.R. Kaazempur-Mofrad, H.F. Younis, S. Patel, A. Isasi, C. Chung, R.C. Chan, D.P. Hinton, R.T. Lee and R.D. Kamm: Cyclic strain in human carotid bifurcation and its potential correlation to atherogenesis: Idealized and anatomically-realistic models 299–314

M. Heil and A.L. Hazel: Mass transfer from a finite strip near an oscillating stagnation point – implications for atherogenesis 315–334

Fluid-structure-interaction models in relation with medical imaging

F.N. Van de Vosse, J. De Hart, C.H.G.A. Van Oijen, D. Bessems, T.W.M. Gunther, A. Segal, B.J.B.M. Wolters, J.M.A. Stijnen and F.P.T. Baaijens: Finite-element-based computational methods for cardiovascular fluid-structure interaction 335–368

J.R. Cebral, M.A. Castro, O. Soto, R. Löhner and N. Alperin: Blood-flow models of the circle of Willis from magnetic resonance data 369–386

A. Leuprecht, S. Kozerke, P. Boesiger and K. Perktold: Blood flow in the human ascending aorta: a combined MRI and CFD study 387–404

D. Zeng and C.R. Ethier: A mesh-updating scheme for hemodynamic simulations in vessels undergoing large deformations 405–418

2003 James Lighthill Memorial Paper

T.J. Pedley: Mathematical modelling of arterial fluid dynamics 419–444

Authors index 445

Contents of Volume 47 447–448
